

ARCTIC Tech o con Discussion

Attending: Joe, John Holtzman, Alaina, Mark, Suzanne, Russet, Bill, Conor, Russell, Jack, Nick

- CCD

- QE went nonlinear below 500nm. Grade C device will be installed Monday. New 30 micron will hopefully be delivered by 1st of the year. They have committed to making a new one for us. Full characterization, QE, fringing, sent tomorrow. They are changing the silicate for this run. Joe will do his own characterization. We should be prepared to be stuck with this chip for a while.
